

VOCUS SIP

Vocus SIP is a smart and cost-effective way to connect your business to the PSTN (Public Switched Telephone Network).

SIP Trunks are IP-based connections allowing you to make calls from existing phone systems. They are highly scalable and will seamlessly grow alongside your business. So as your business expands and higher call volumes are required, you can quickly and easily add more lines and users.

OUR SOLUTION FOR YOU

Vocus SIP provides a high-quality SIP Trunk over a dedicated data connection that can be connected to an IP based or a legacy ISDN phone system. We are committed to delivering innovation solutions across different platforms and tailor these solutions to your needs. With millions of voice minutes travelling across our network annually, Vocus is a specialist in delivering SIP Trunks to businesses nationally via our national carrier-grade network.

Potential savings on call costs and line rental.

Carry over your numbers from other providers*

Easily scalable to meet your business needs

24/7 support teams across Australia

Quick and easy to set up

Industry standard SIP protocols ensuring broad compatibility

* Subject to the customer's existing carrier's number porting arrangements. Vocus provides porting from all mainstream Australian carriers. Porting fees may apply.

WHO IS IT FOR?

Vocus SIP suits small to large organisations looking for high quality, cost-effective, scalable telephony access.

	Small 10 - 100 Staff		Medium 100 - 500 Staff		Large 500+ Staff
---	-------------------------	---	---------------------------	---	---------------------

FEATURES AND BENEFITS

COST SAVINGS

- Your business benefits from affordable connection, rental line fee and call charges.
- Only pay for what you use with per second billing on calls (for applicable tariffs). Premium plans which include local, national and calls to Australian mobiles are also available for peace of mind.
- Competitive International rates.

HIGHLY SCALABLE

- As your business grows, additional call capacity can be quickly added, and in much less time. A typical SIP Trunk deployment can vary in size, ranging from ten to thousands of lines.

STATE-OF-THE-ART PLATFORM

- Depending on your needs, Vocus SIP is delivered using either the BroadSoft BroadWorks® platform or the GENBAND® platform.
- Our Vocus Core Voice Infrastructure is secure and highly redundant.

DEDICATED BANDWIDTH WITH QUALITY OF SERVICE

- Vocus SIP Trunk includes a private dedicated bandwidth with Quality of Service, ensuring your voice calls are always crystal clear.

BUSINESS CONTINUITY

- Supports your disaster recovery strategies, our experienced voice specialists can help you create the right business continuity solution for your business needs.

NUMBER PORTABILITY*

- Numbers can be assigned across a customer's sites or relocated as number ranges are not tied to SIP Trunks.
- Depending on your carrier, porting fees may apply.

24X7 SUPPORT DESK

- Our support teams are based in Australia and available around the clock.
