

# CLOUD CONNECT

Vocus Cloud Connect is your private, high-speed connection to Australia's top public clouds, including Amazon Web Services (AWS), Microsoft Azure and more. When you invest in cloud solutions, make sure you back them up with network connectivity you trust.

## OUR SOLUTION FOR YOU

With Vocus Cloud Connect, your data takes the most direct route to your content on the Vocus network, resulting faster transfer speeds and more secure connection. This means you have your own dedicated connection, linking you to private cloud providers.

Vocus Cloud Connect delivers point-to-point Ethernet connectivity and also integrates cloud connectivity into Vocus IP WAN, which means you can access cloud services directly from any end point on your Vocus IP WAN.

One connection to many cloud providers

Potential savings on colocation and data transfer charges

Connection speeds from 50Mbps to 10Gbps<sup>^</sup>

Connect from anywhere on the international Vocus network

Layer 2 & layer 3 connection options

National helpdesk for professional support

<sup>^</sup> In predefined increments

## WHO IS IT FOR?

Vocus Cloud Connect suits any sized business needing a direct, private connection to their cloud providers.

	Small 10 - 100 Staff		Medium 100 - 500 Staff		Large 500+ Staff
--	-------------------------	--	---------------------------	--	---------------------

## FEATURES AND BENEFITS

### FLEXIBLE

- Layer 2 and Layer 3 connections are available with speeds from 50Mbps up to 1Gbps (Layer 3) and up to 10Gbps (Layer 2) in pre-determined increments. Once connected, cloud provider connections can be scaled up to allow for growth and increased demand.

### VARIETY

- A Layer 2 deployment provides a connection over which you can set-up a direct routing relationship. The network layer is yours to control
- A Layer 3 deployment into a Vocus MPLS IP-WAN network provides a cloud gateway shared amongst all sites and users on your network, ensuring availability independent of one single site

### SIMPLE

- All you need is an account with your desired cloud provider (i.e. AWS, Microsoft Azure or IBM Softlayer) and Cloud Connect will provide you a private connection all the way to your chosen cloud provider

### SUPPORT AND ASSURANCES

- Vocus Cloud Connect comes with a comprehensive SLA, with support to our Network Operations Centre should you have any questions or concerns

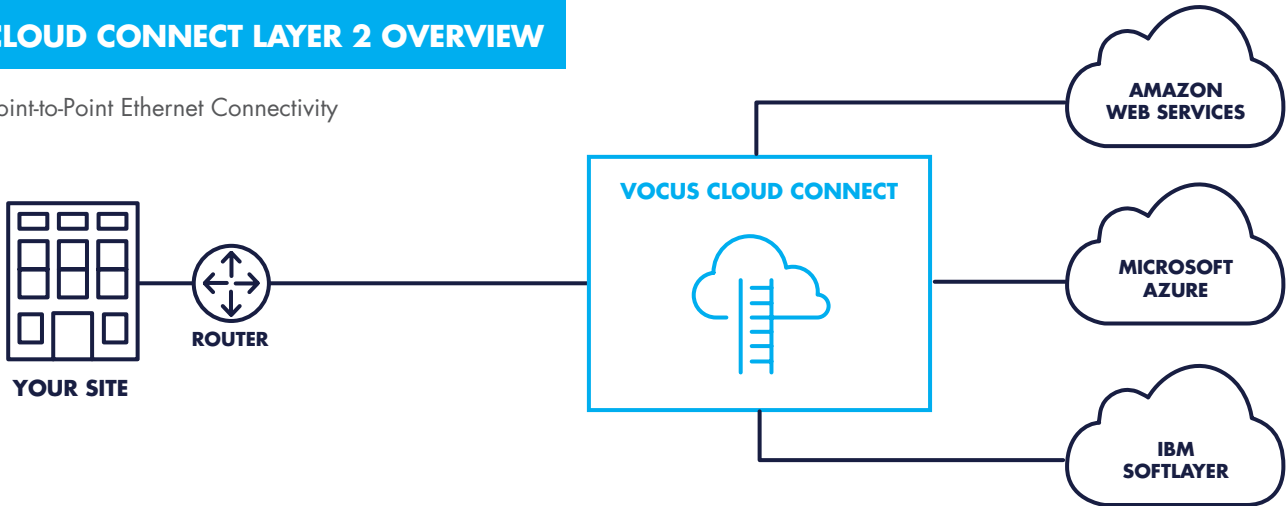

### COST SAVINGS

- Depending on your usage, Cloud Connect can offer significant cost savings when accessing cloud providers compared to accessing via the public internet. Some cloud service providers charge different download rates depending upon connectivity. For example, direct connections incur lower Amazon Web Services download costs when compared with public Internet access costs (as charged by AWS).

# NETWORK OVERVIEW.

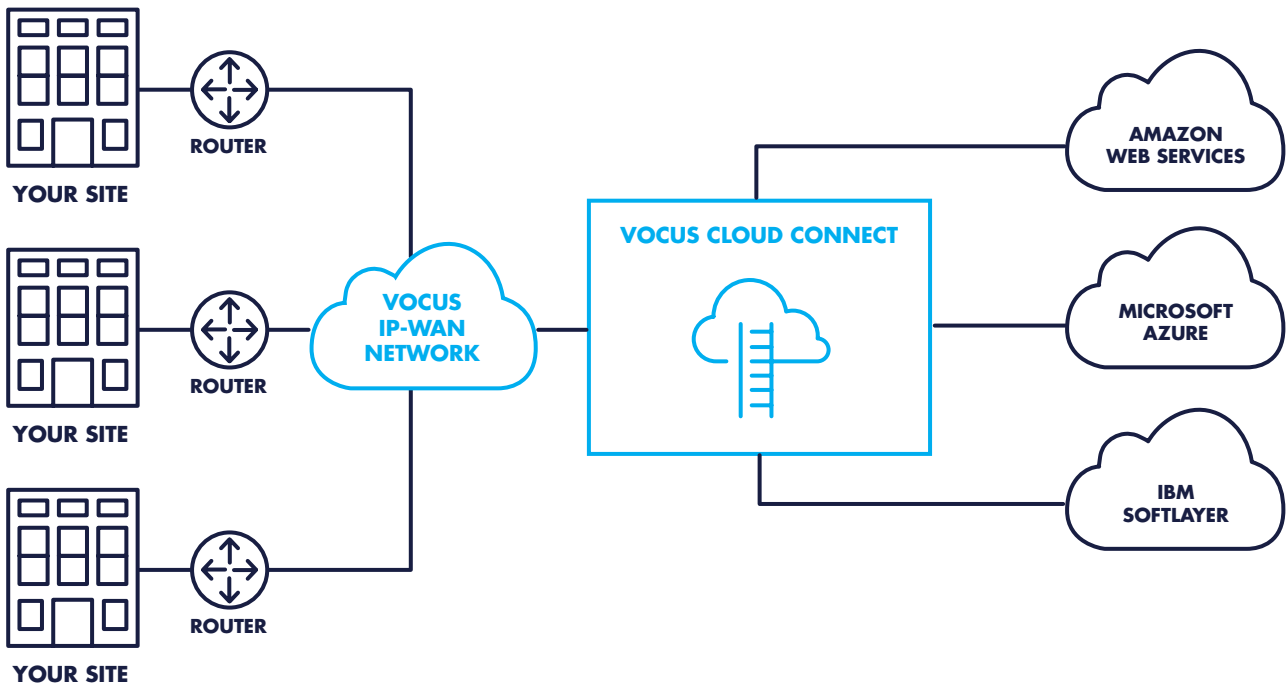

## CLOUD CONNECT LAYER 2 OVERVIEW

- Point-to-Point Ethernet Connectivity

## CLOUD CONNECT LAYER 3 OVERVIEW

- Intergration into IP WAN
